Items marked with an asterisk (\*) are ordinarily available in microfilm or photoprint only. Items marked with two asterisks (\*\*) have not been verified.

Call numbers following the citations are those of the United States Department of Agriculture Library.

Except for printed publications of the Department of Agriculture, which are usually available in limited supply for free distribution, the publications listed herein are not available for free distribution from the Department. However, photoprint or microfilm copies of any publication listed may be obtained from the Library at the following prices:

MICROFILMS: 50 cents for any single article, from any single volume of a periodical. Books and Serial Publications.--50 cents for each 50 pages or fraction thereof.

PHOTOPRINTS: 10 cents for each page of text, with a minimum charge of 50 cents per item.

PUBLICATIONS OF THE UNITED STATES DEPARTMENT OF AGRICULTURE, STATE AGRICULTURAL EXPERIMENT STATIONS, STATE AGRICULTURAL EXTENSION SERVICES, AND BOOKS AND PAMPHLETS FROM OTHER SOURCES

U. S. D. A. PUBLICATIONS

Includes printed and processed publications of the Department received in the library during the preceding month, except materials issued for internal administrative use rather than for public distribution, and war-restricted publications.

Periodicals issued by the Department will be listed in the June and December issues only, but articles in them will be indexed currently in the sections covering periodical and serial literature.

Printed publications may be obtained free upon application to the Office of Information, United States Department of Agriculture, Washington 25, D. C., as long as the Department's supply lasts. After this free distribution is exhausted, publications may be purchased from the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Processed publications may ordinarily be obtained free of charge from the issuing bureau as long as the supply lasts.

Publications preceded by an asterisk (\*) are not available for distribution; microfilm or photostat copies can be supplied at the cost of preparing them.

"Author makes an attempt to formulate the essence of the teaching of soil as a polydispersed system (dispersoidology of soils) and give a brief summary of the main trends and results acquired by the soviet scientists in their investigations of this problem during 25 years of the development of Soviet Union (1917 - 1942)."

"The author recognises the need for some procedure which could determine, on the spot, the physical and mechanical properties of the soil and which could be used as a guide for more profitable and definite experiments with agricultural machines.

"After proving that the modern methods of the soil science cannot be applied definitely in the sense indicated he reaffirms his complete confidence in the principle of the dynamometric shovel proposed a century ago by Gasparin."

"A rapid method is described for determining the exchangeable hydrogen and the total exchangeable bases of a soil. These procedures entail simple pH determinations of a suitable buffer soil mixture. It is estimated that 15 to 20 determinations per hour can be made. A comparison of the results obtained by the pH methods and the results obtained by other methods indicates excellent practical agreement."

"The story of the nitrogen process in France that is told here is based upon official French documents. It deserves attention as an experiment in post-war planning which, on the whole, has proved to be a failure. We ought to learn from former experiences. Here is one that reveals the intricacies of such widely discussed topics as partnership between government and business, exploitation of sequestered enemy-alien patent rights, government controlled factories, and the like."

Although L. Cohen's method of preventing oxidation in dips used to control *Boophilus annulatus australis* is undoubtedly effective, lactose is less expensive and easier to dissolve in the fluid. Further tests need to be made under various conditions. Author suggests that 6-10 lbs. of lactose be added to dip 3-4 days before use.

U. S. D. A. Miscellaneous Publication 337, Abbreviations Used in the Department of Agriculture for Titles of Publications, is followed in this publication.

Items marked with an asterisk (\*) are ordinarily available in microfilm or photoprint only. Items marked with two asterisks (\*\*) have not been verified.

Call numbers following the citations are those of the United States Department of Agriculture Library.

Except for printed publications of the Department of Agriculture, which are usually available in limited supply for free distribution, the publications listed herein are not available for free distribution from the Department. However, photoprint or microfilm copies of any publication listed may be obtained from the Library at the following prices:

MICROFILMS: 50 cents for any single article, from any single volume of a periodical. Books and Serial Publications.--50 cents for each 50 pages or fraction thereof.

PHOTOPRINTS: 10 cents for each page of text, with a minimum charge of 50 cents per item.

PUBLICATIONS OF THE UNITED STATES DEPARTMENT OF AGRICULTURE, STATE AGRICULTURAL EXPERIMENT STATIONS, STATE AGRICULTURAL EXTENSION SERVICES, AND BOOKS AND PAMPHLETS FROM OTHER SOURCES

U. S. D. A. PUBLICATIONS

Includes printed and processed publications of the Department received in the library during the preceding month, except materials issued for internal administrative use rather than for public distribution, and war-restricted publications.

Periodicals issued by the Department will be listed in the June and December issues only, but articles in them will be indexed currently in the sections covering periodical and serial literature.

Printed publications may be obtained free upon application to the Office of Information, United States Department of Agriculture, Washington 25, D. C., as long as the Department's supply lasts. After this free distribution is exhausted, publications may be purchased from the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Processed publications may ordinarily be obtained free of charge from the issuing bureau as long as the supply lasts.

Publications preceded by an asterisk (\*) are not available for distribution; microfilm or photostat copies can be supplied at the cost of preparing them.

- The larvae, which feed on honey and pollen, are most troublesome in weak bee colonies and in stored combs. Combs in storage can be fumigated with carbon bisulfide, 1 ounce to 3 Langstroth hives. Slightly infested combs can be washed with water and returned to bees to clean. The bees have no difficulty in removing beetle larvae from the combs, although they seldom succeed in driving out adults. Weak colonies should be strengthened.

Control measures suggested in this part are: proper camp siting beyond flight range of Anopheles from natural breeding places; provision of adequate drainage; avoidance of anopheline breeding in rain-filled car tracks.
